

The Future of Species Description

- FAIR & CARE
- More accessible for non-specialists/non-taxonomists
- Standardized with regards to GBIF/CoL
 - Nomenclatural acts
 - Taxonomic statements/changes

Nomenclature

- Registration -> Faster to CoL/GBIF
- Mandatory sequence? see Mycology

Taxonomy

- More DNA-based
- Traceable concepts/TNU:s
- More explicit species hypothesis, including some kind of circumscription
- Informative enough to be meaningful and not just a “nomen nudum”
- often not enough with just photo or illustration, needs a specimen
- More automated – AI assisted
